To-do list web app

-Elham atri

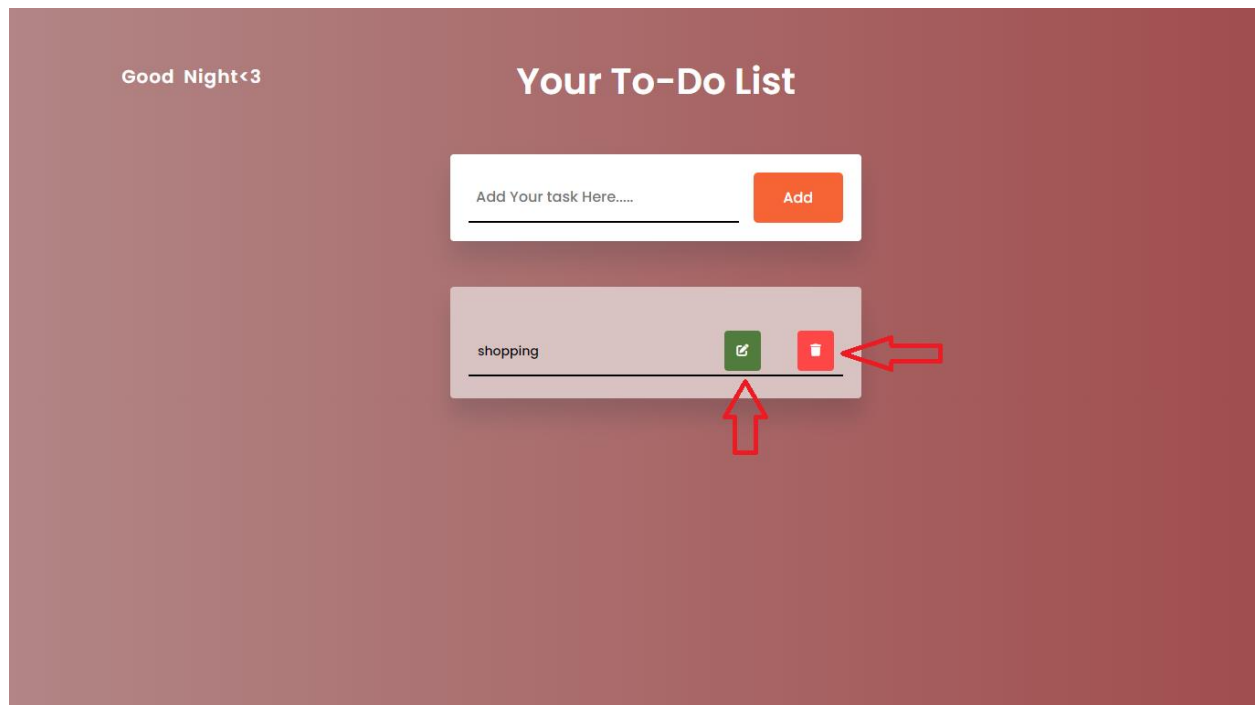

The screenshot shows a web application interface with a dark red background. In the top left corner, the text "Good Night<3" is displayed in white. In the top center, the title "Your To-Do List" is shown in white. Below the title, there is a white rectangular input area containing the placeholder text "Add Your task Here.....". To the right of this input area is an orange button with the word "Add" in white text.

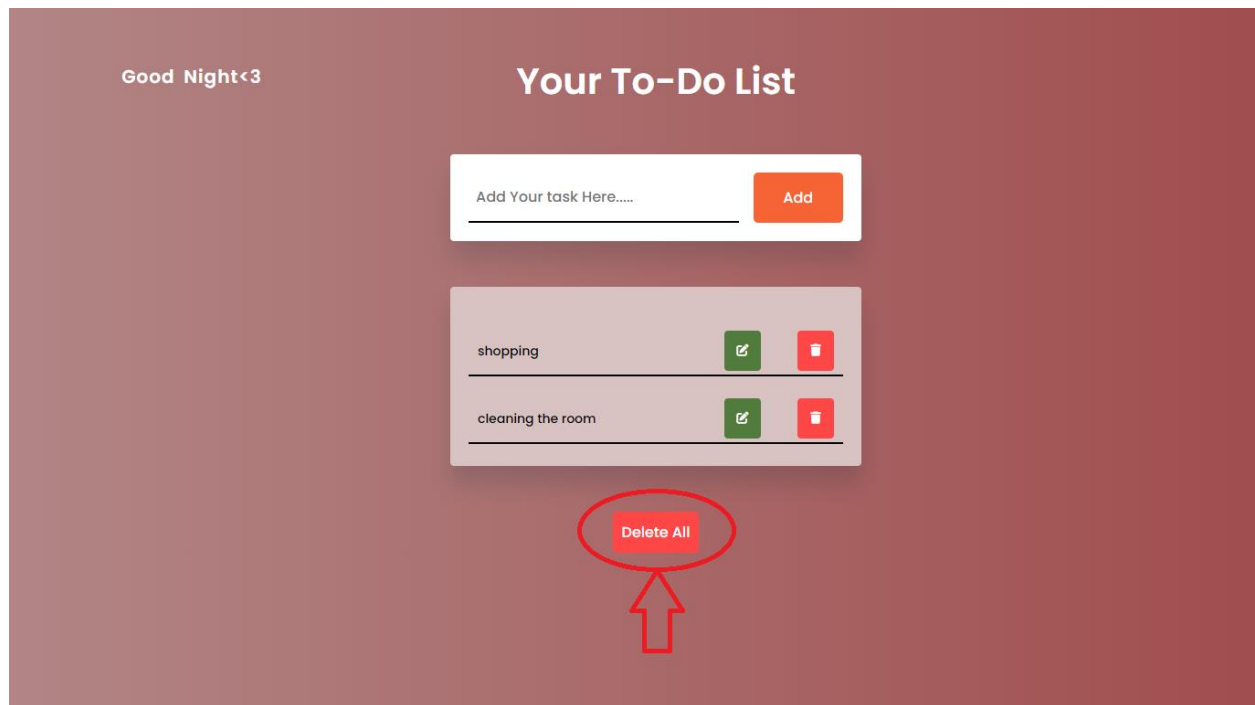

I used CSS and JavaScript to create a "to-do list" to organize and prioritize my tasks.

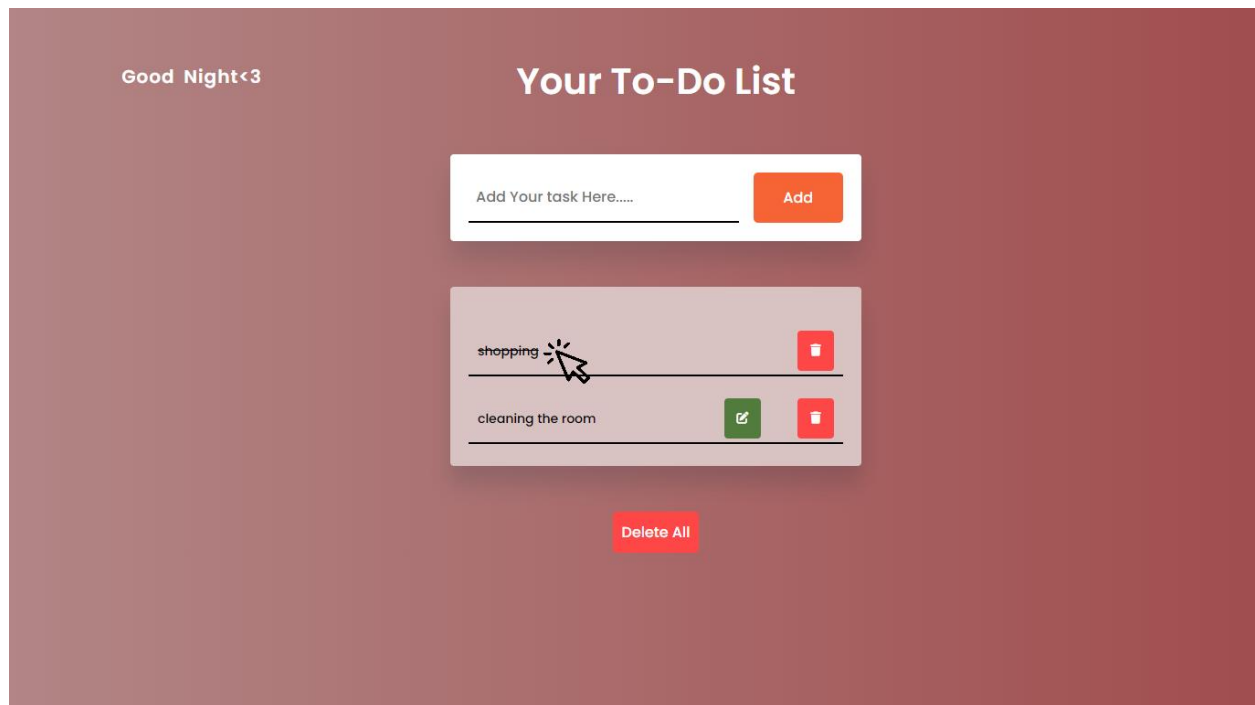

type the daily tasks in the task box and click on "Add".

Also, if needed, we can edit or delete tasks individually.

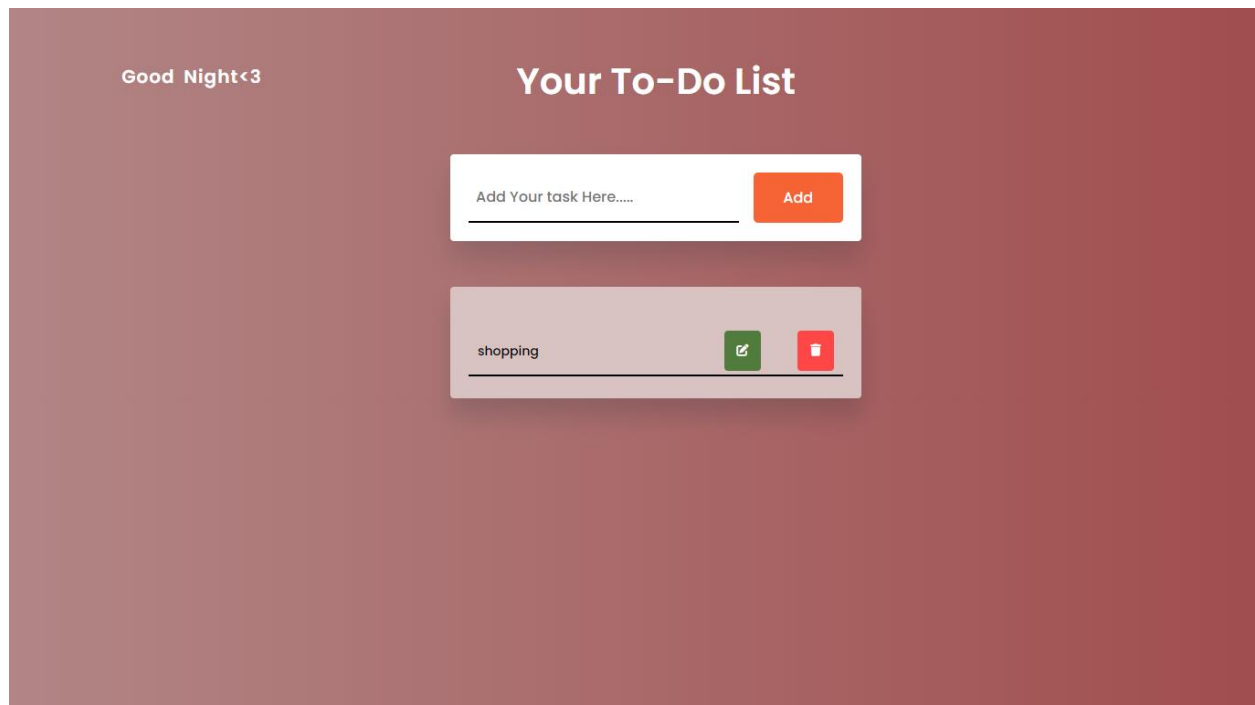

Or we can delete all tasks at once (and not individually).

By clicking on each task, a line is drawn on it

And if a mistake occurs, it will return to the first state by clicking again.

Also, a greeting is displayed according to the user's system clock.
